Continuation of 3. NOTE: The amendment to claims 1 and 17 raises new issues that would require further consideration and search.

Continuation of 11. does NOT place the application in condition for allowance because: The Applicant's argument on a two-stage flash separation is not persuasive, because Sankey invention does provide a two-stage flash distillation. The limitations from the specifications can not be imported on the claim. Applicant's argument mentioning that it would not have been obvious to use the less exact/precise flash process of the Applicant over a distillation/fractionation process, is not persuasive because of the motive of great price reduction in the Applicant's approach. Natural gas condensate composition of Tipman is very close to the Applicant's composition and both liquids would be expected to perform alike.
